

Land Target Solutions

Autonomous Solutions is a world leader in the automation of OEM land-based vehicles for military and industrial applications. Utilizing our standardized hardware and software building blocks, Autonomous Solutions has assembled and refined a family of scalable land target solutions that match the needs of target range operations.

High-Precision GPS Based Target Solutions – Able to safely navigate around simulated urban environments and complex combinations of known obstacles.

Cost-Effective GPS Based Target Solutions – Low cost alternative for range or live-fire operations, including open range areas and typical roads or landing strips.

Guideline™ Leader-Follower Target Solutions – Uses a tether positioning system. No GPS or communications infrastructure is required. No computer-based user control station is required. Just connect the automated vehicle to any lead vehicle using the tether positioning system.

Land Target Solutions Features and Highlights

Cost-Effective GPS Based Target Solutions

- Designed for open driving environments or for operations where collateral damage may occur
- Full range of unmanned operation capability from basic remote control to autonomous driving control
- Multi-tier safety systems
- Upgradable to higher precision system
- Easy installation/removal

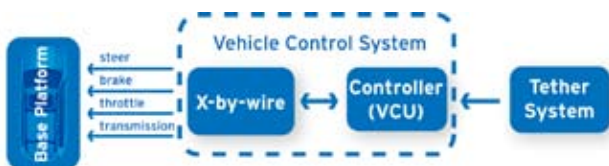

High-Precision GPS Based Target Solutions

- Remote operation of a target vehicle with complex human-like driving behaviors
- Full range of unmanned operation capability from basic remote control to autonomous driving control for single or multiple vehicles
- Accuracy to within just a few inches for complex urban environment
- Multi-tier safety systems
- Outstanding portfolio of communications offerings to suit the needs of all range operations
- Easy installation/removal

GuideLine™ Leader-Follower Target Solutions

- No infrastructure requirements for GPS, communications, control stations
- Usable anywhere, anytime, in any weather or environmental conditions
- No setup required and minimal training required
- Relocates operators to an untargeted lead vehicle

The best way to evaluate one of our Land Target Systems for your application is to see it in action.

Please request Autonomous Solutions' videos and presentations illustrating our Target systems.
